Introduction

- **High Temp., Dryness on Climate impact recently**

- ⇒ High Temperature and continuous drought phenomenon in winter
→ Increase forest fire in Fall/Winter
 - ⇒ Increase forest fire occurrence potential by early agricultural activities

- **Climate Change on Global worming**

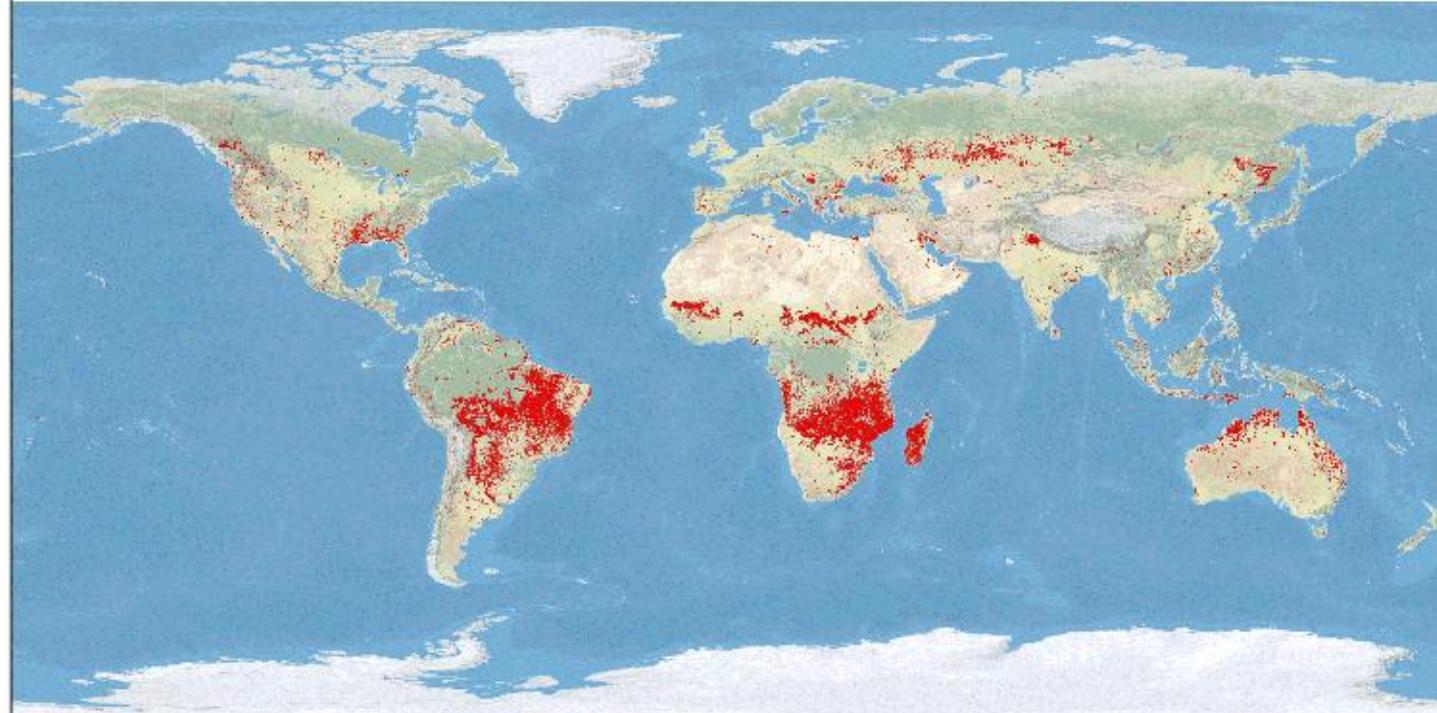

- ⇒ Increase possibilities of large-sized forest disaster such as forest fire, landslide and forest disease/insect. etc.
 - ⇒ Needs to develop social disaster prediction techniques

Introduction

MCDIS Rapid Response Active Fire Detections for 2006

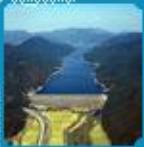

From : Web Fire Mapper

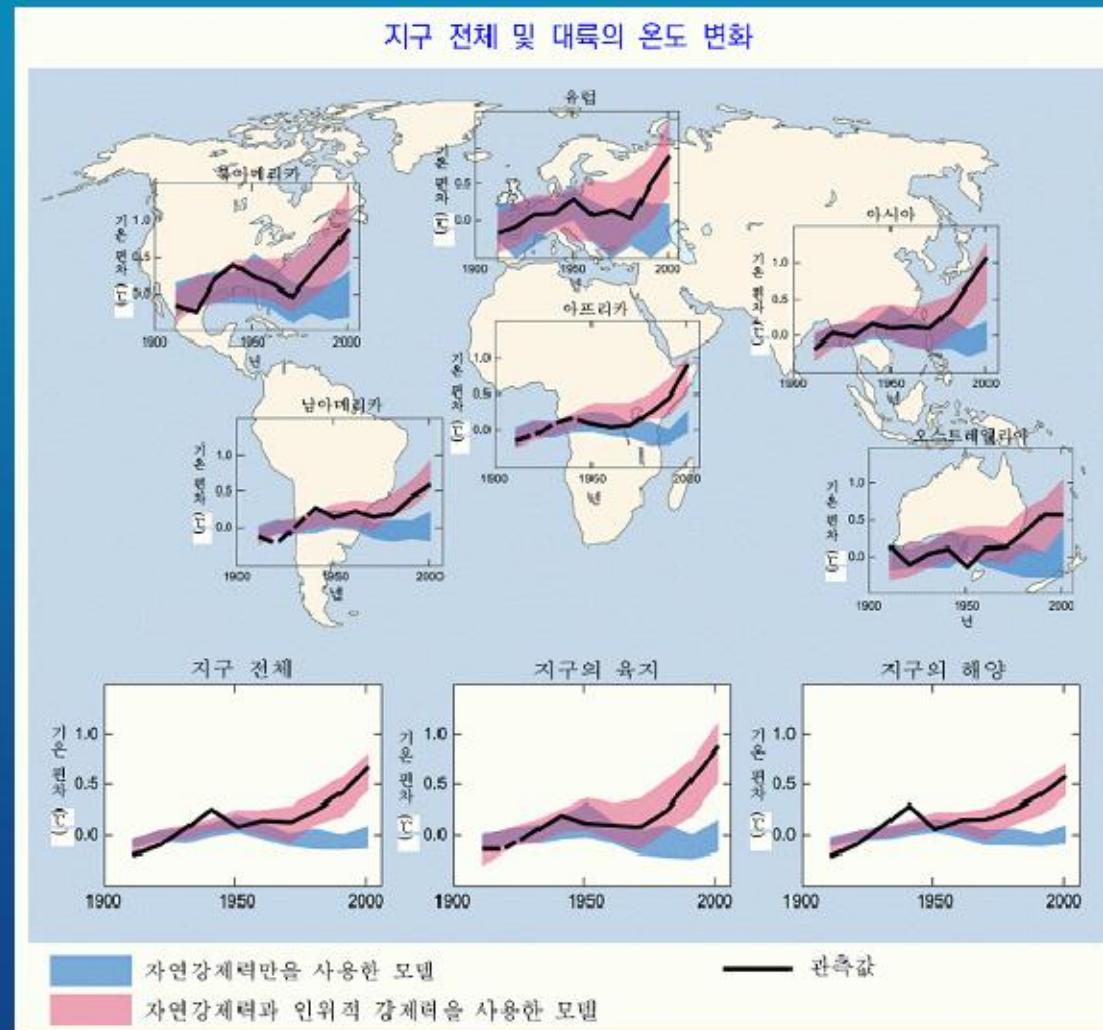

January February March April May June July August September October November December

Active fires, shown in red, are detected using MODIS data from the Terra Satellite.

Introduction

(IPCC 2007, KMA)

Introduction

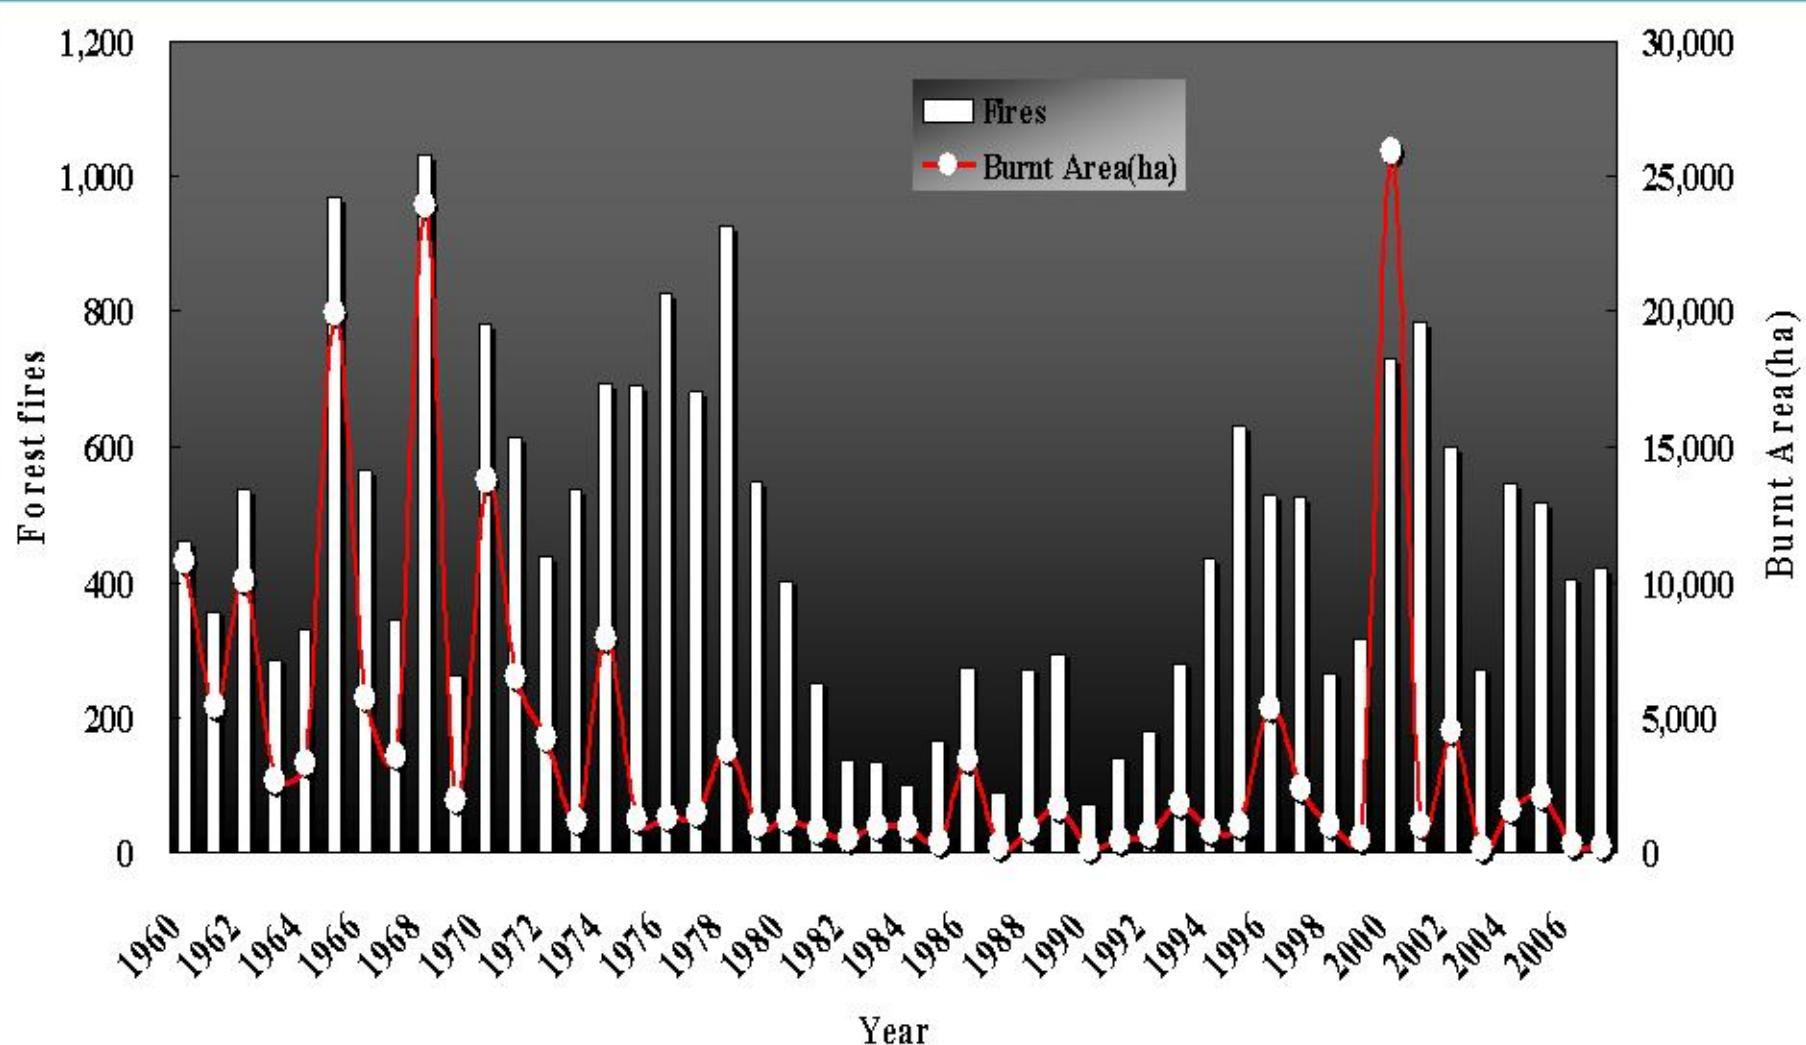

- Report for fire effects and terrestrial forest ecosystems(Southampton, 2006)

Introduction

Fire Status, Korea

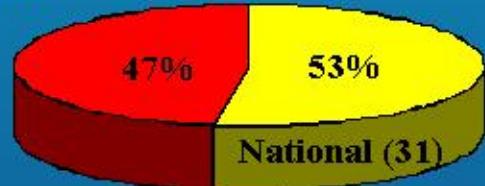

Introduction

Large fire distribution(30ha over)

Fire Number

East Coast (28)

Burned Area

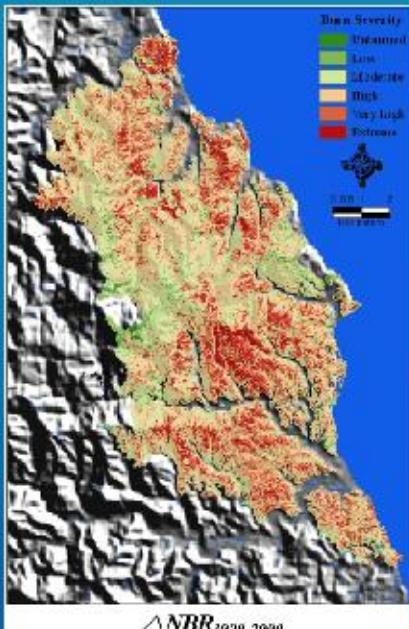

National(36,918ha)

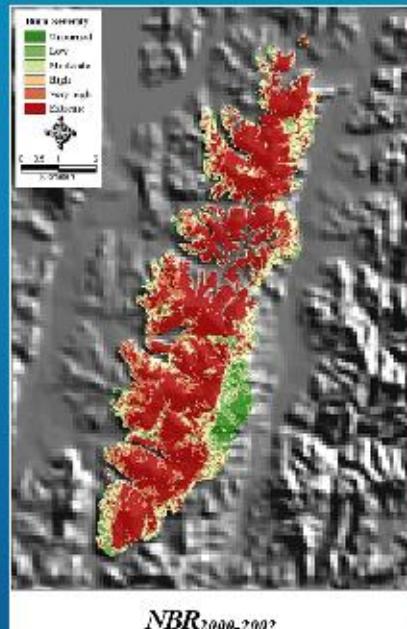

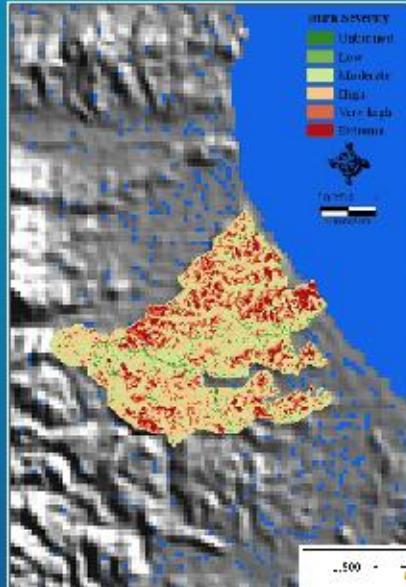

Introduction Damaged area/Burn severity(NBR)

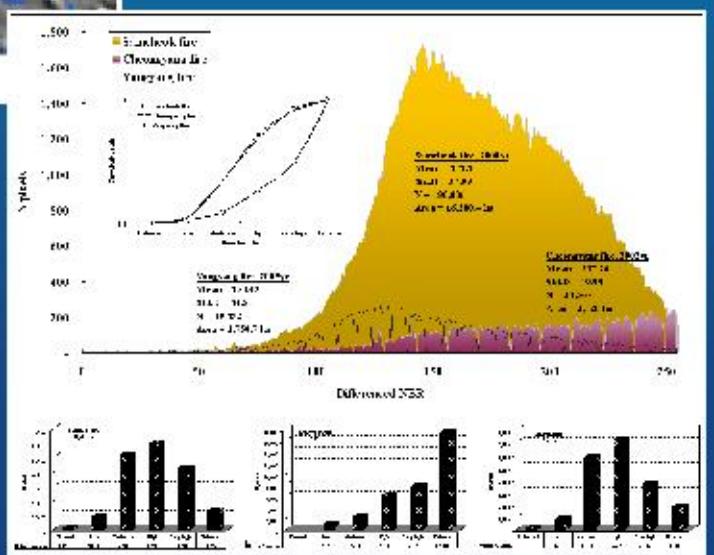

$\Delta NBR_{1999-2000}$

$NBR_{2000-2002}$

$NBR_{2004-2005}$

❖ NBR & ΔNBR

☞ Key and Benson 2002, 2006 (USFS RMRS)

- $NBR = (R4-R7)/(R4+R7)$
- ΔNBR (Differenced Normalized Burn Ratio)

$$\checkmark \Delta NBR = NBR_{prefire} - NBR_{postfire}$$

Introduction

Non-CO₂ Emissions from Biomass burning

(Unit: Gg yr⁻¹)

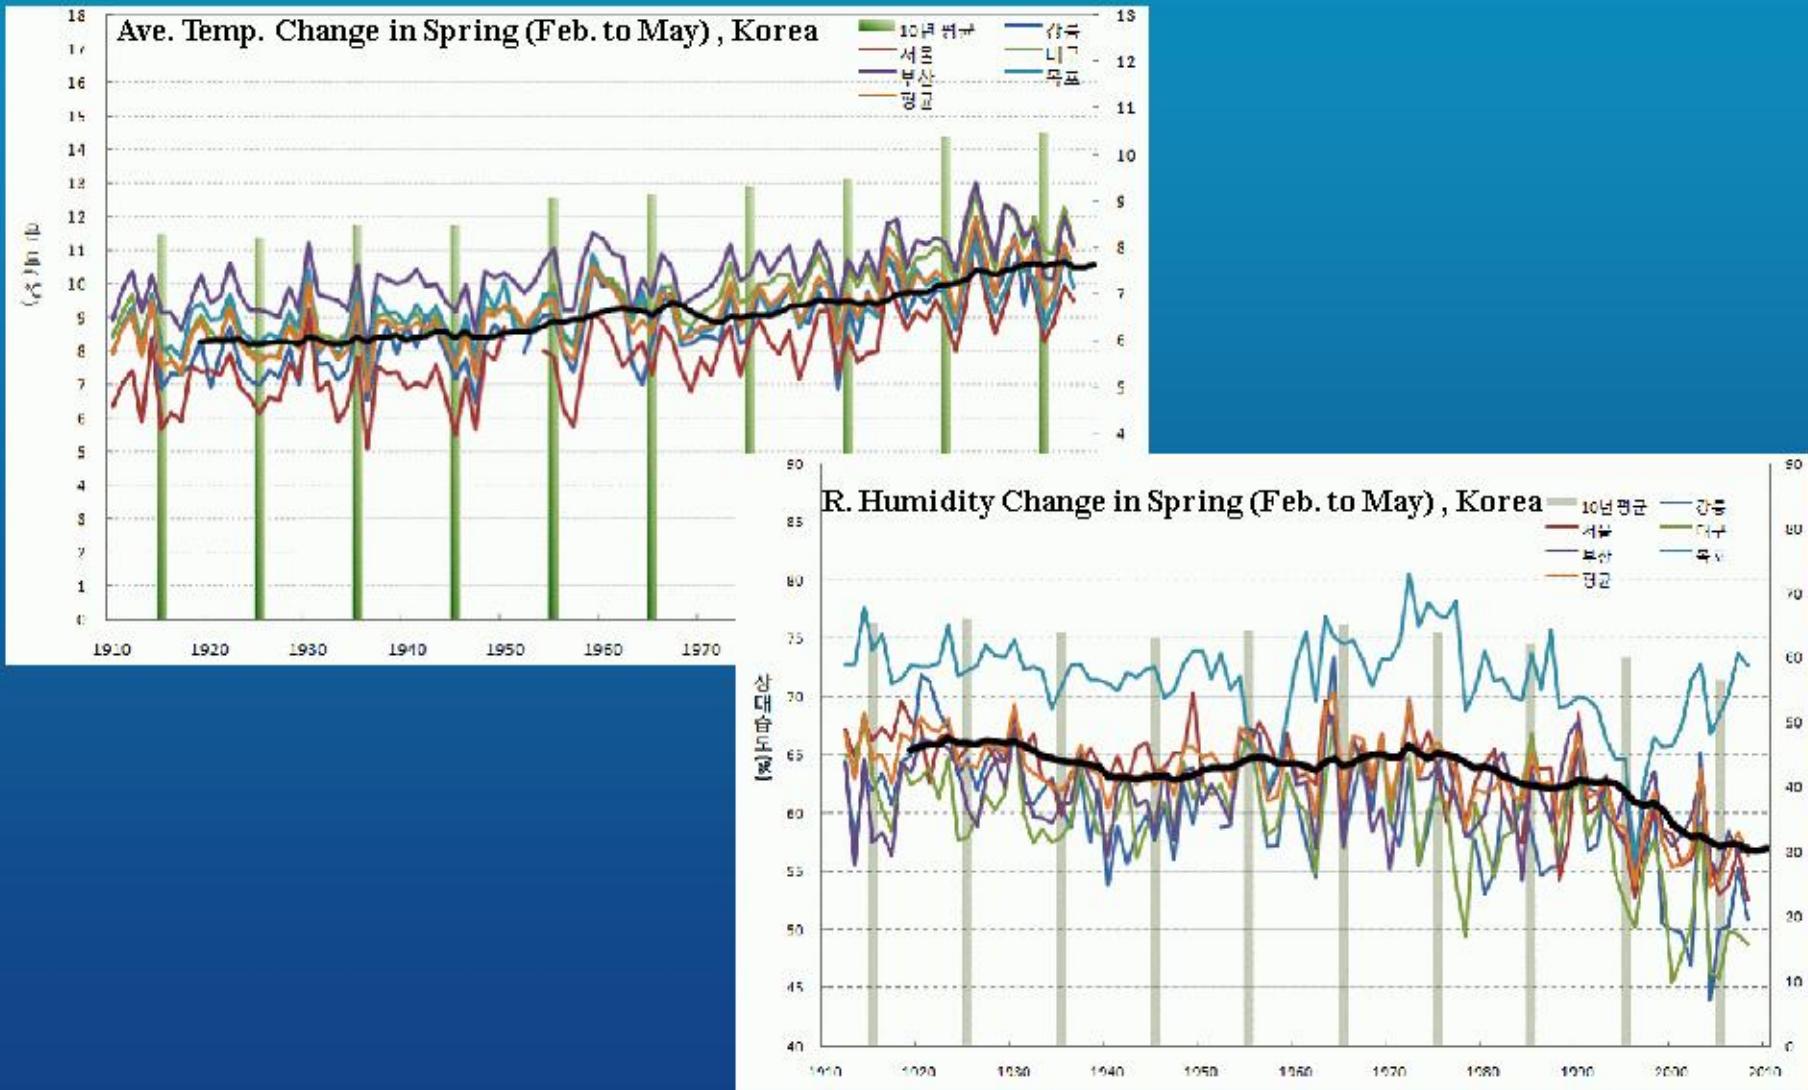

Classes	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006
CH ₄	1.11	0.52	0.26	14.85	0.58	2.82	0.09	1.09	1.47	0.19
CO	16.04	7.45	3.72	214.56	8.38	40.80	1.26	15.78	21.24	2.71
N ₂ O	0.01	0.01	0.00	0.18	0.01	0.03	0.00	0.01	0.02	0.00
NO _x	0.09	0.04	0.02	1.16	0.05	0.22	0.01	0.08	0.11	0.01
Total	17.25	8.01	4.00	230.75	9.02	43.88	1.36	16.97	22.84	2.91

The results of applying IPCC Guidelines(2003 GPG, 2006 GL) equation to estimate non-CO₂ greenhouse gases emissions from biomass burning in South Korea is released 93% of CO, 6.4% of CH₄, 0.5% of NO_x, and 0.5% of N₂O in order.

Fire & Climate

Fire frequency on Climate change

The MODIS on the Aqua satellite captured this image of fires burning in the Korean Peninsula on April 9, 2004.

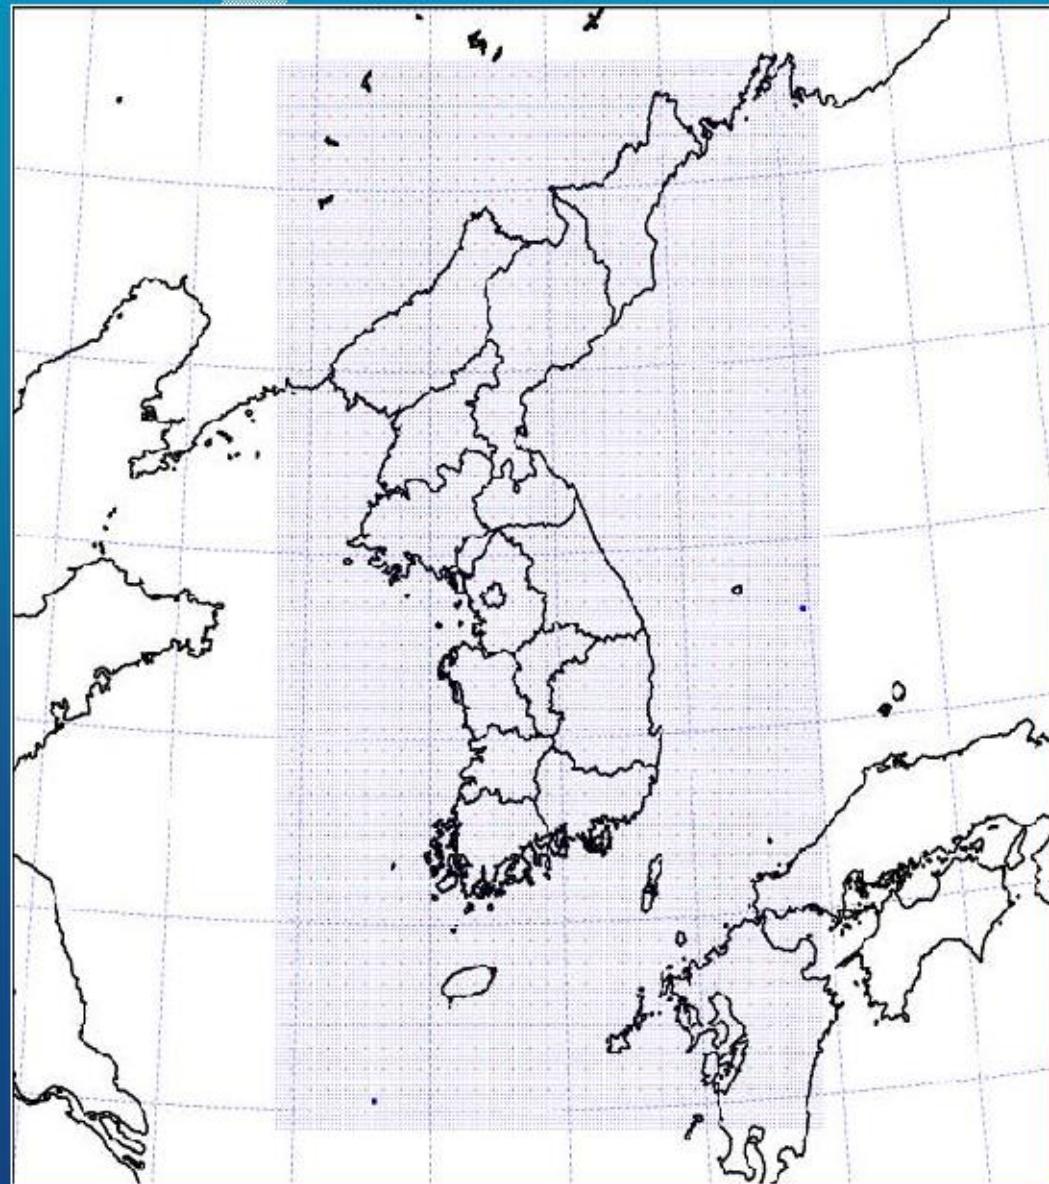

Application of digit weather forecast data

Fire & Climate

Application of digital weather forecast data

Digital weather data?

- ❖ Digital weather data info.
 - Grid interval : 5km
 - Grid points : E/W149 × S/N 253
→ 37,697 points)
 - Grid points distance :
E/W 745km, S/N 1,265km

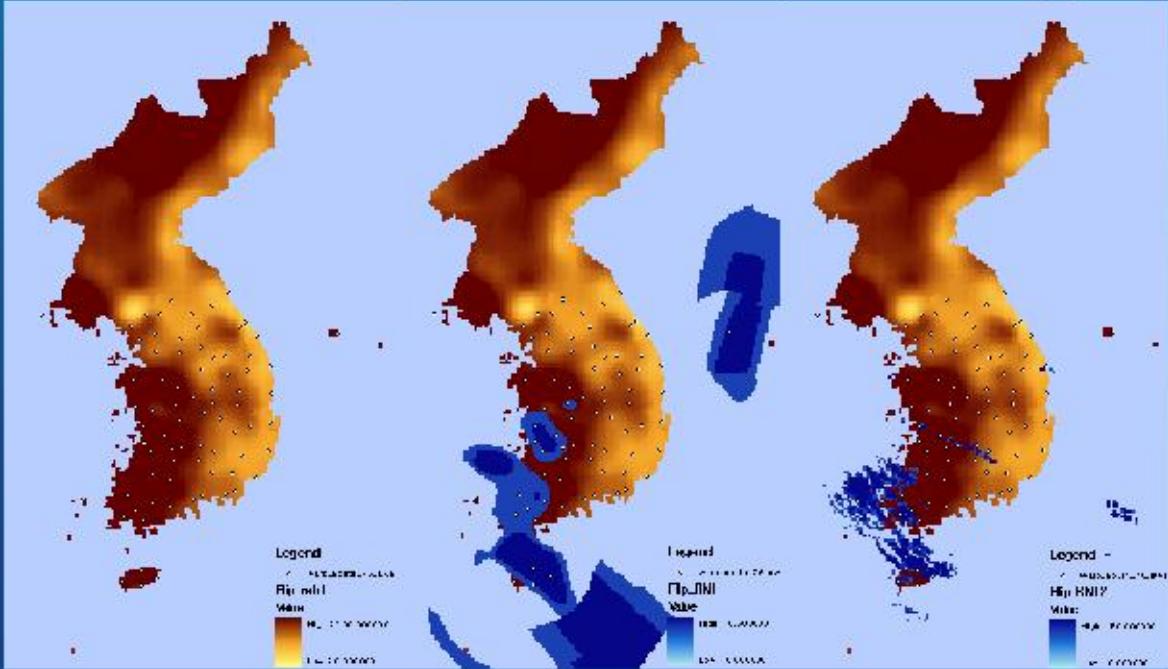

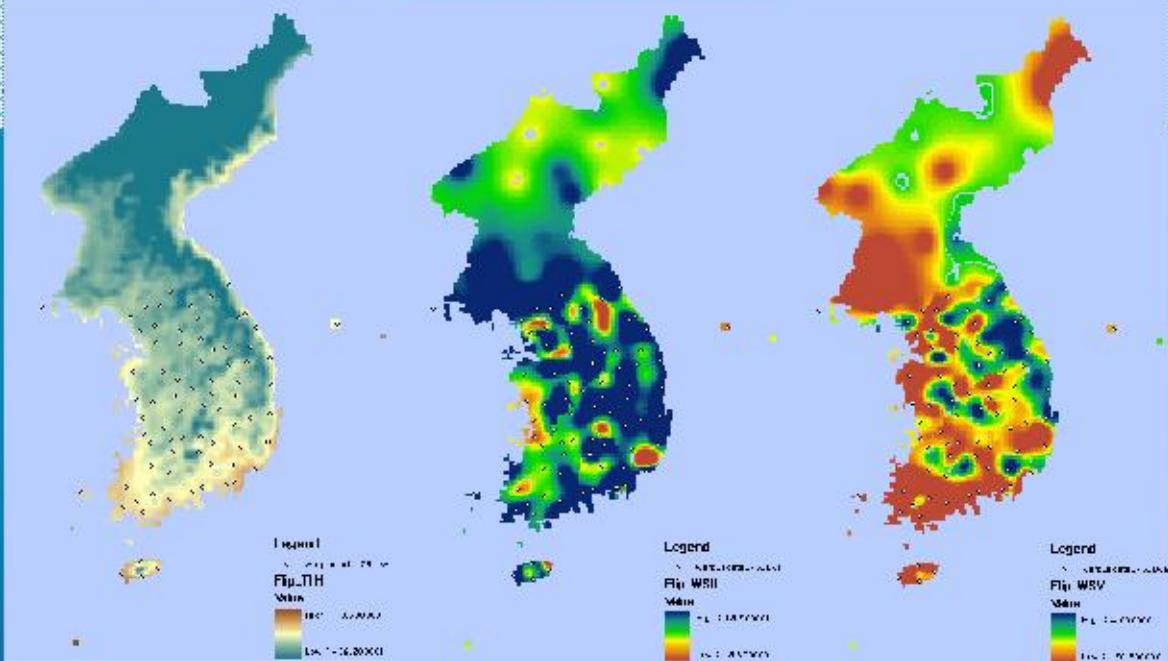

Fire & Cli

- ❖ Building of fire weather data using digit weather

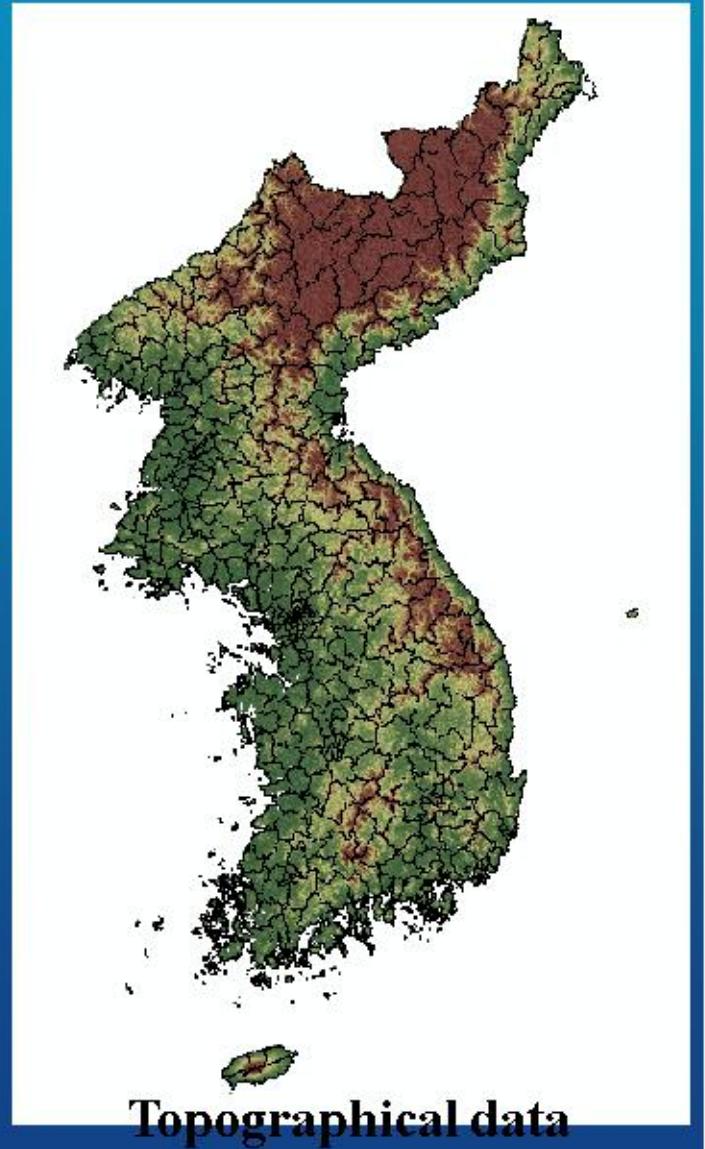

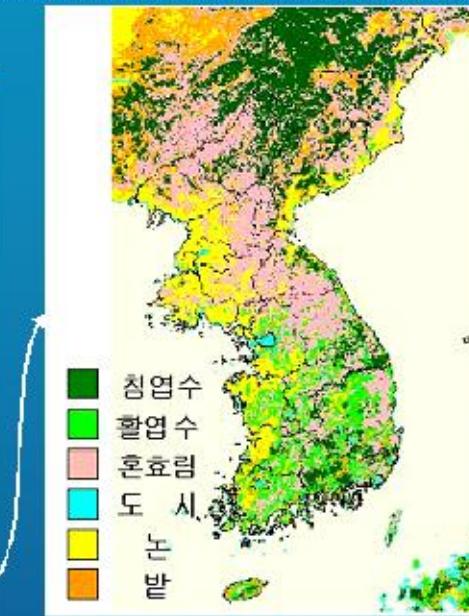

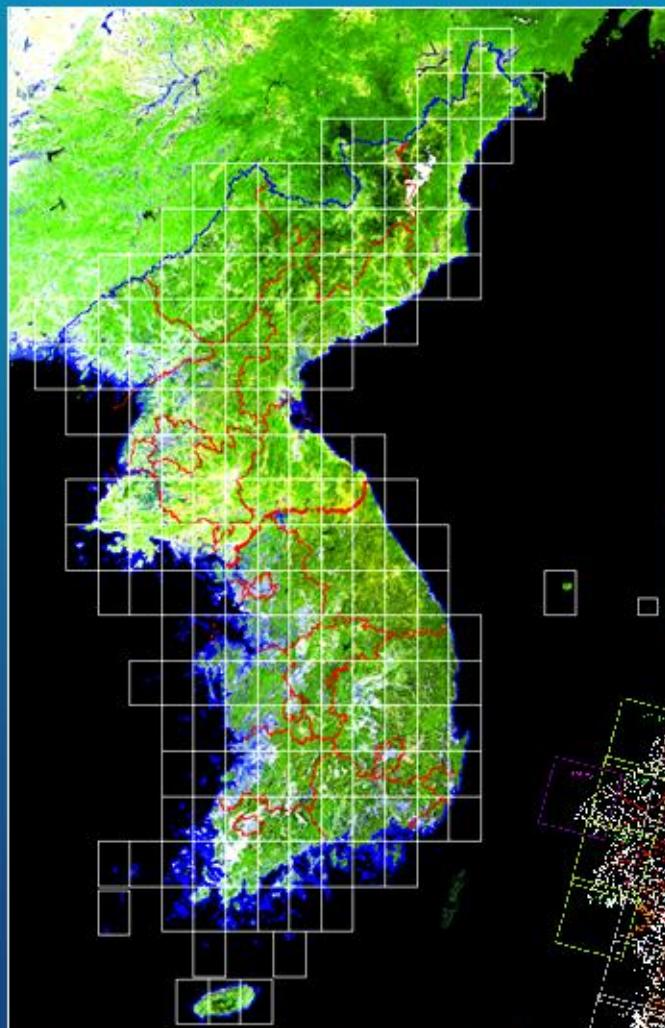

(2005.12.12 . 08:00)

- 5km x 5km grid
- weather factors :
 - Temp.
 - R. Humidity,
 - UN Wind speed,
 - 1hr rainfall, 12hr rainfall

Fire Occurrence Hazard

Methods

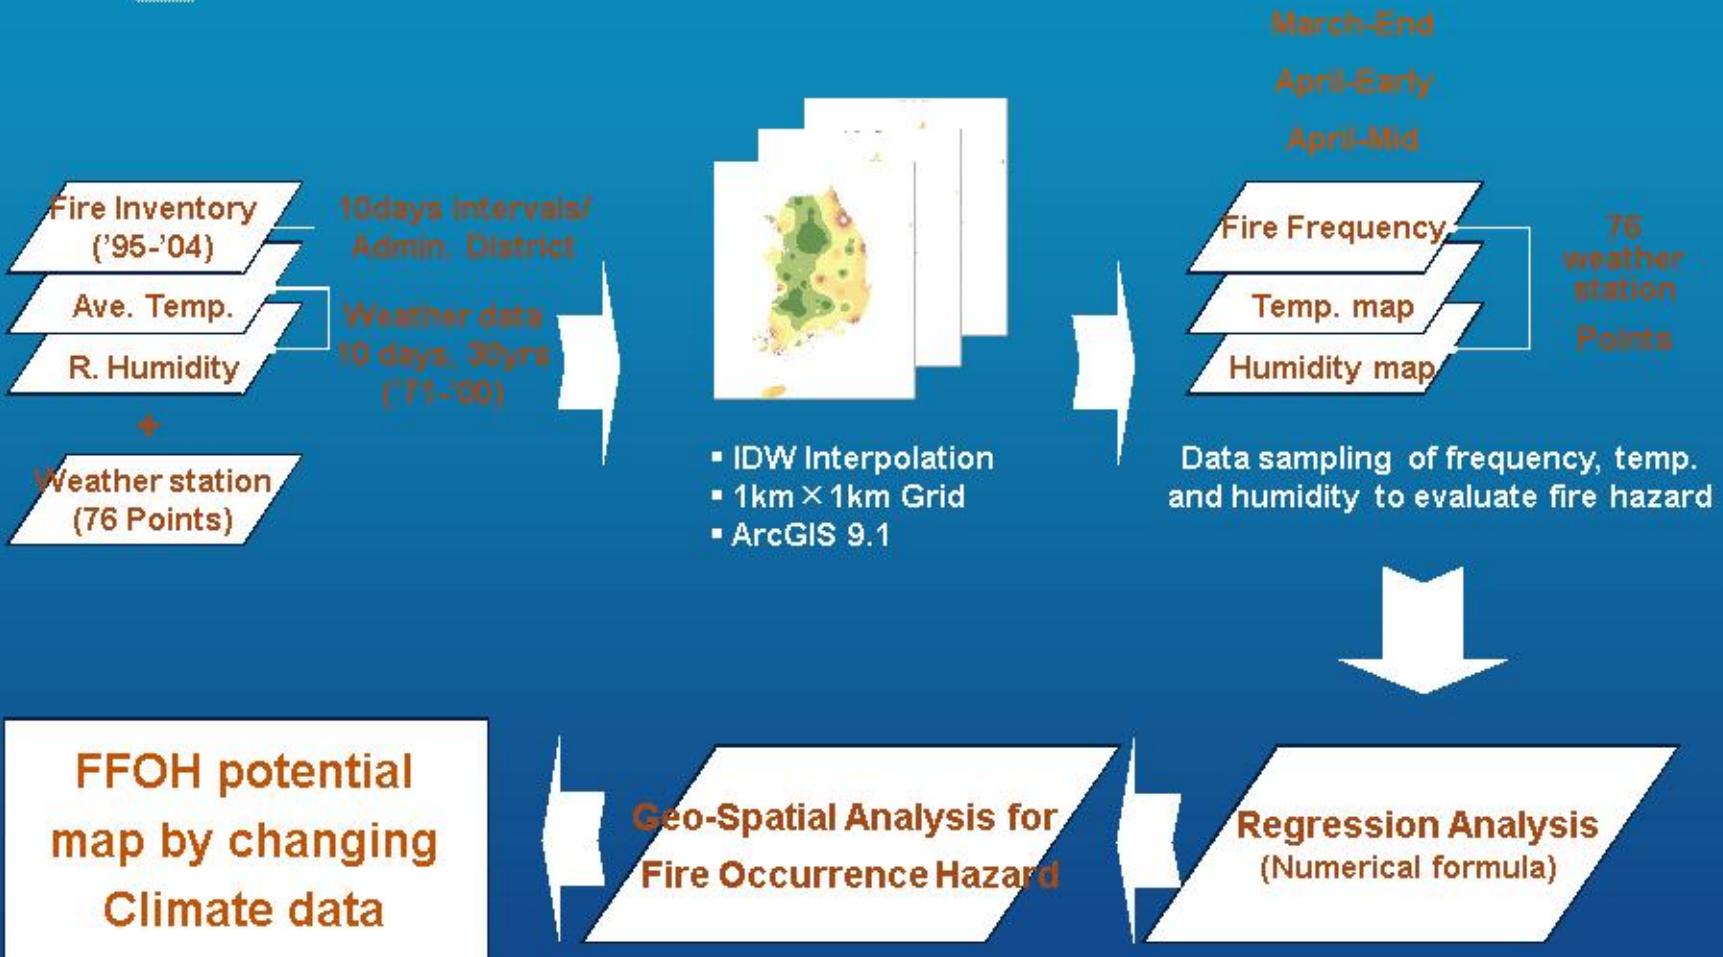

Ratio Intervals of JAN to DEC, 10 yrs

Fire Occurrence Hazard

Methods

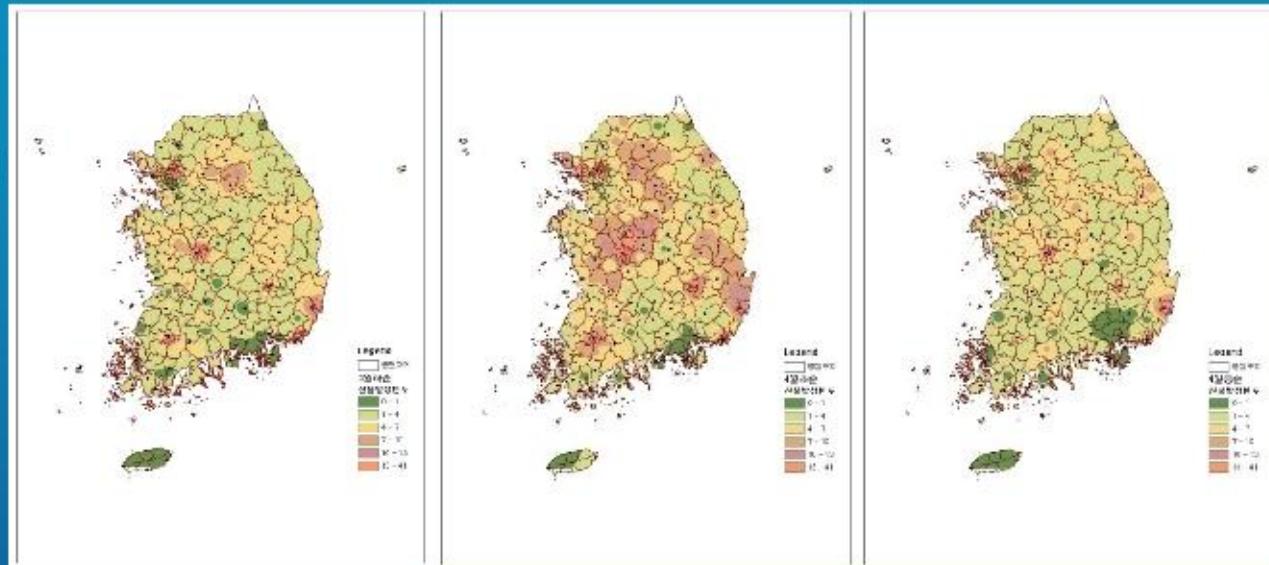

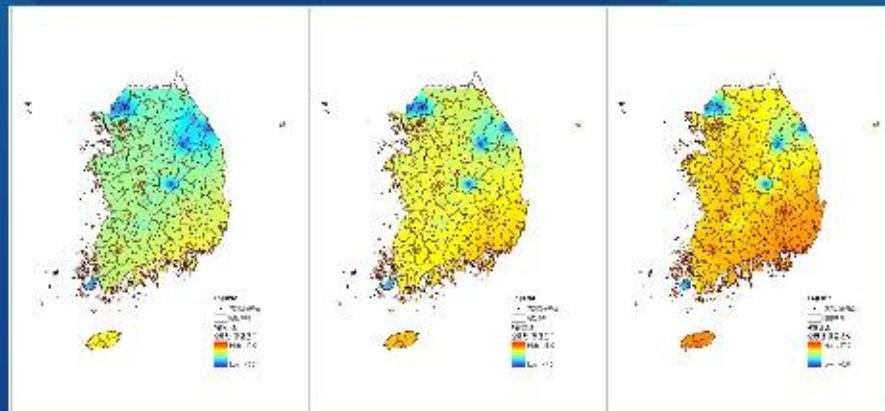

Fire Occurrence Hazard

Results

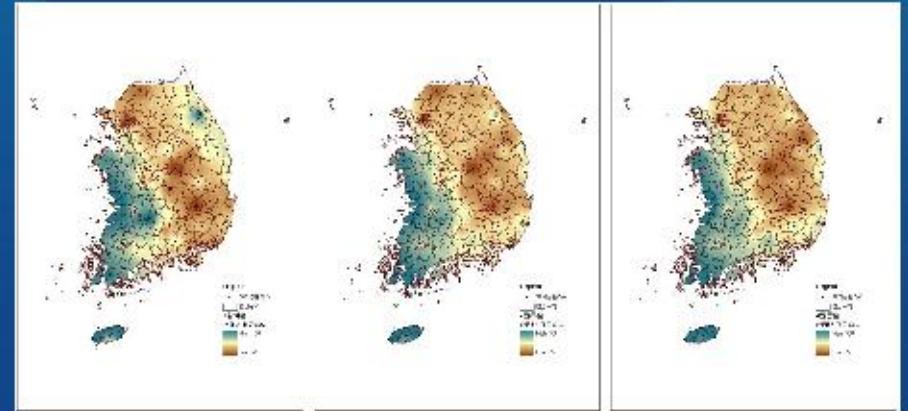

Fire frequency,
10-days intervals,
10 yrs

Ave. Temp., 10-days intervals, 30 yrs

R. Humidity , 10-days intervals, 30 yrs

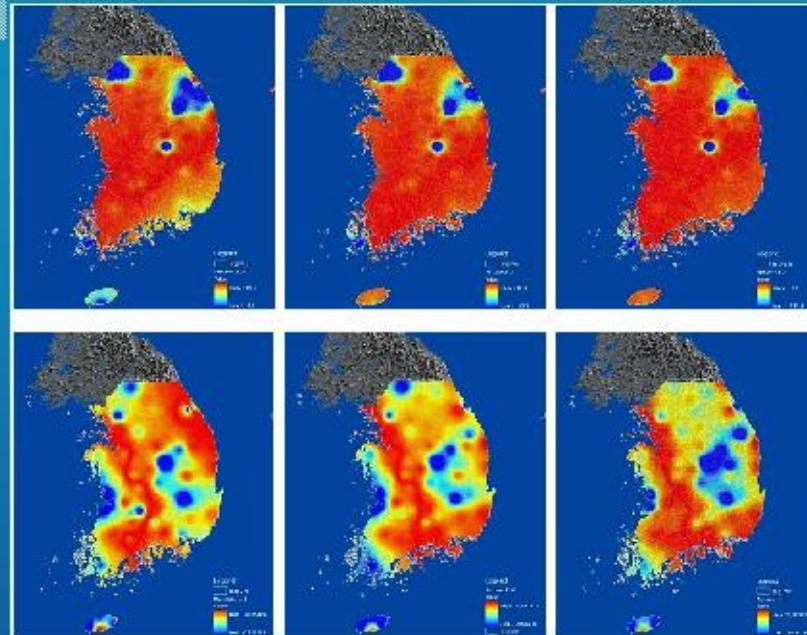

March end, April early, April mid

Fire Occurrence Hazard

Results

Forest fire occurrence hazard potential by changing Temp. and R. Humidity

Fire Occurrence Hazard

Results

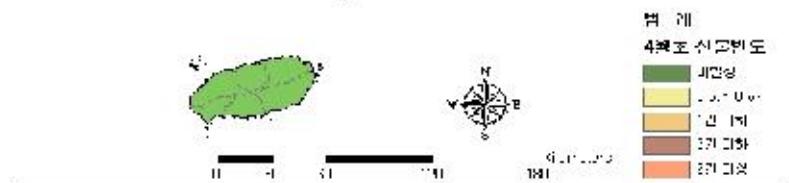

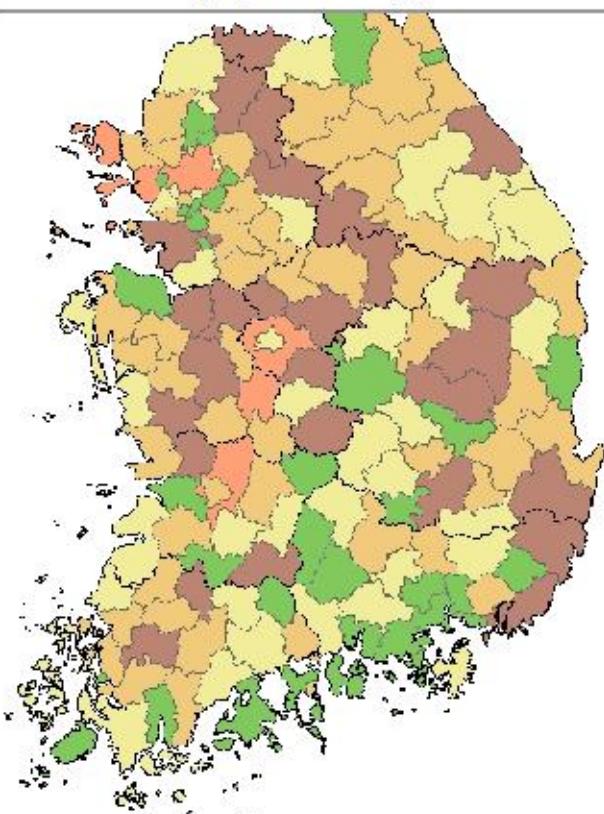

Fire frequency by regions

❖ April early, Extreme fire season

❖ Fire frequency by regions

- ✓ Forest fire occur often in the Metropolitan area Seoul, Daejeon, Daegu ,etc.

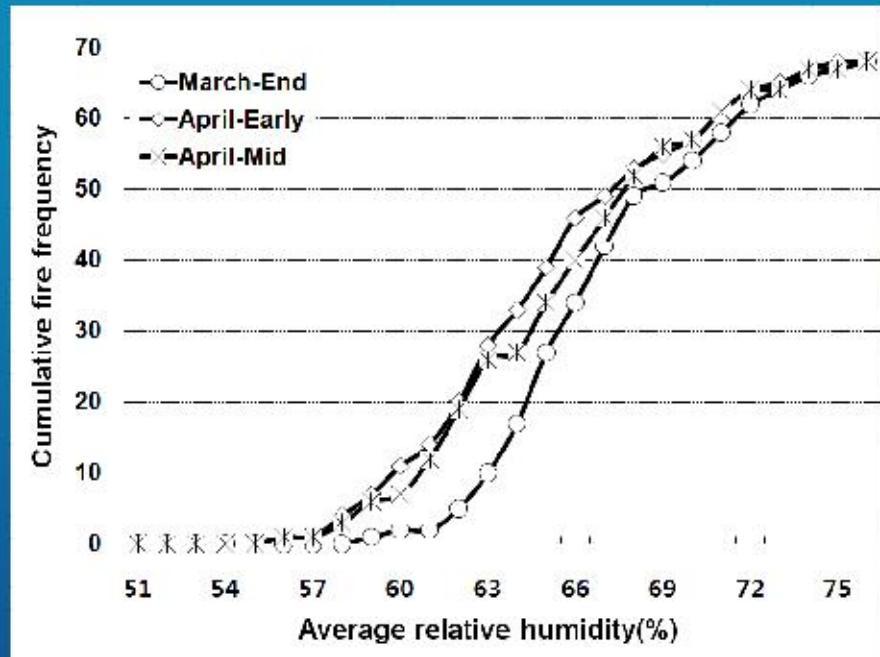

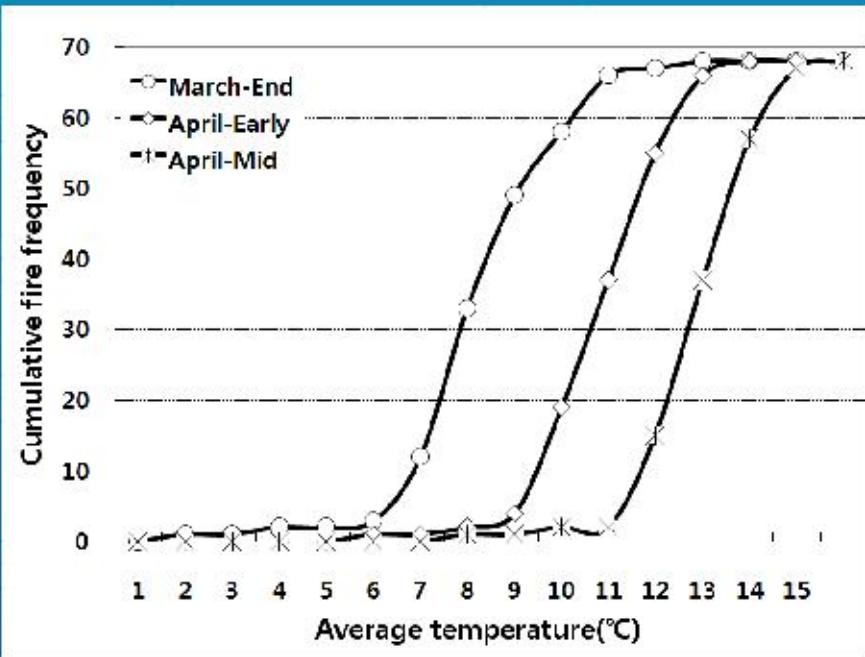

Fire Occurrence Hazard Map
(April Early)

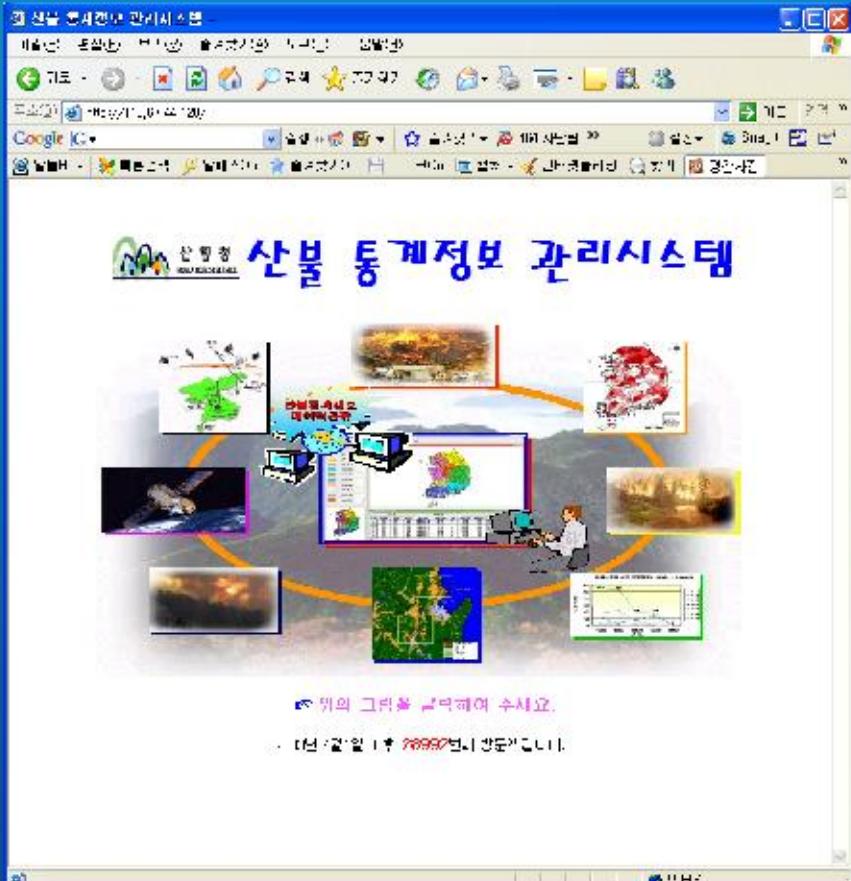

Fire Occurrence Hazard

Results

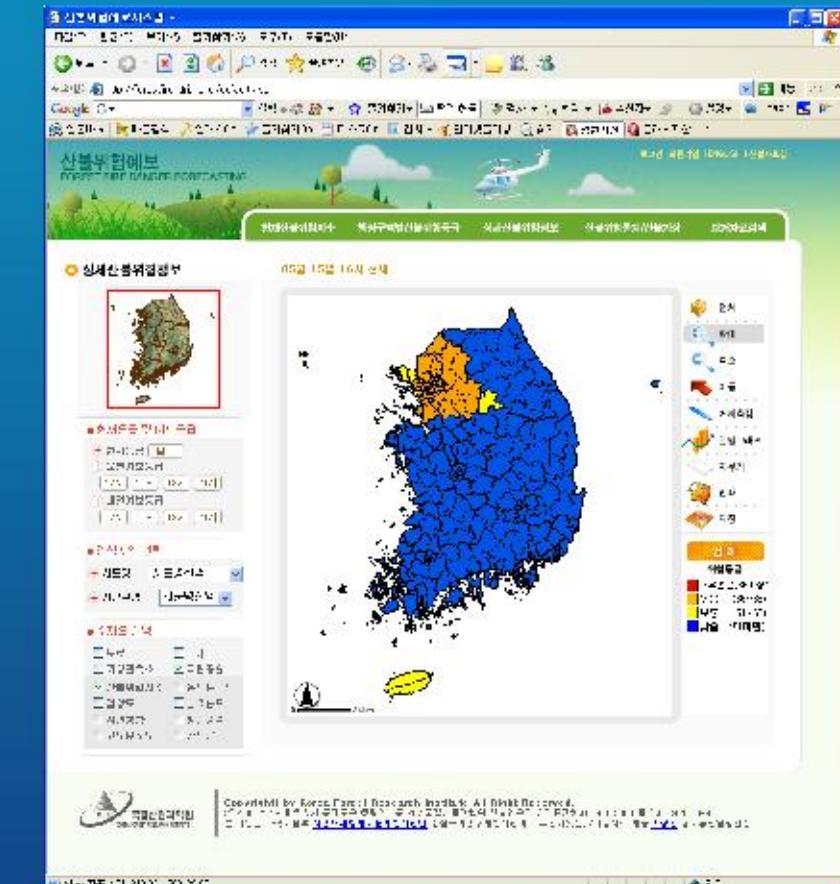

- Cumulative forest fire frequency by the change of temperature and relative humidity

Forest fire and Geo-spatial data management

Forest fire and Geo-spatial data management

- ⦿ Forest fire + FFDRI + Weather data
 - 2008.04.04 16:00 ~ 17:30
 - Fire cause : Weed burning
 - Fire danger rating index : 85.1
(danger rating : High)
 - Suncheon weather station
 - Temp. : 18.6°C
 - Ave. WS/WD : 3.7m/s(WNW)
 - Effective Humidity : 48.0%

Forest fire and Geo-spatial data management

⌚ Application in the field of forest fire

- Forest fire occurrence location by year/regions/10-day interval, 30 years

- ➔ Analysis of regional and 10-day interval forest fire

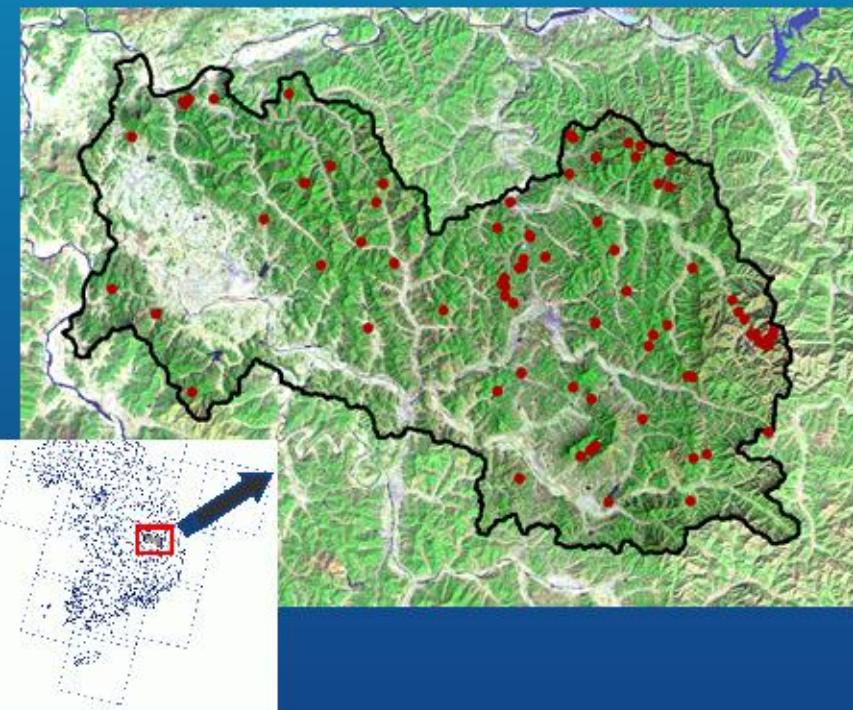

Fire & Fuel

Fuel type classification, Fuel map

- Study area

- Central interior

- Categories analyzing

- Landsat Satellites

- Topo. Correction : C-Correction
- Forest type classification
[conifer, deciduous, Mixed]
- AGB, SB Estimation

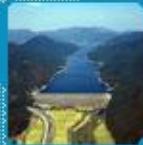

- Soil condition : Soil humidity

- On-site survey : AGB, SB

- tree height, DBH, fuel load [78]

Building Fuel Map

Fire & Fuel

Fuel type classification, Fuel map

● Relation between AGB and SB of Conifer(On-site)

▪ Coniferous forest (3 types)

- Moderately moist soil (n=13)

$$y = 0.0587x + 5.06 \quad (R^2 = 0.6972)$$

- Slightly dry soil (n=16)

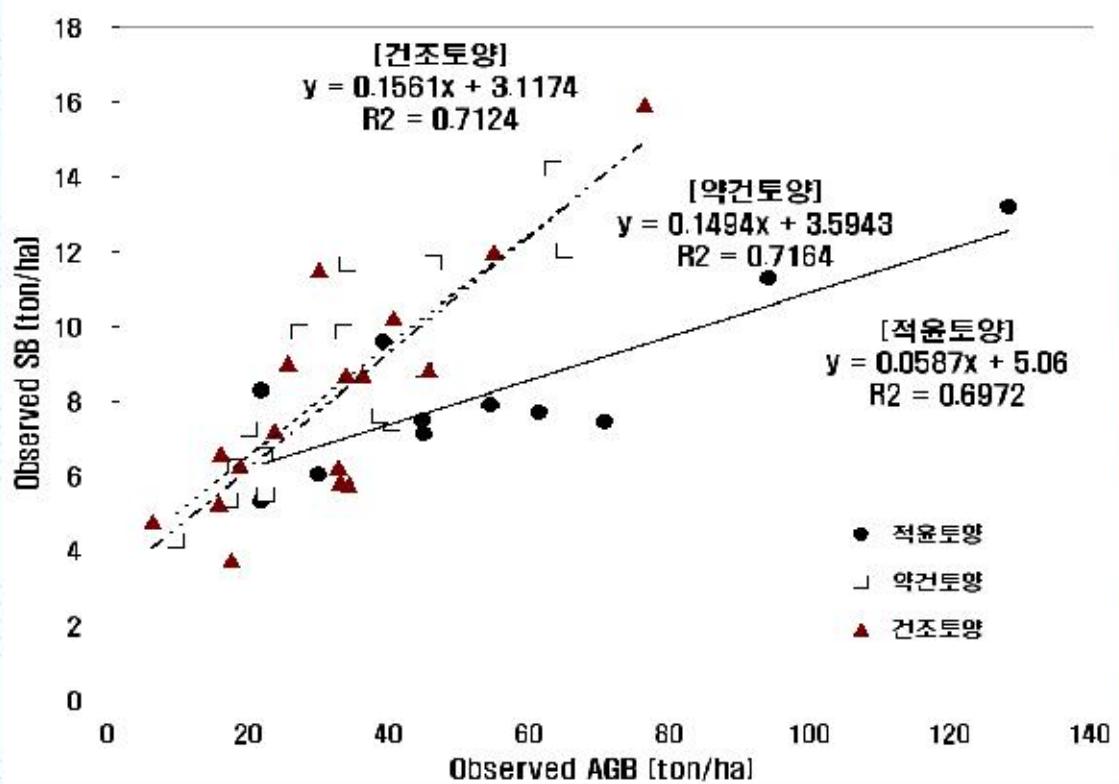

$$y = 0.1494x + 3.5943 \quad (R^2 = 0.7164)$$

- Dry soil (n=19)

$$y = 0.1561x + 3.1174 \quad (R^2 = 0.7124)$$

▪ Deciduous forest (1type)

$$y = 1.99x0.4354 \quad (R^2 = 0.7221)$$

Pinus densiflora Sieb. et Zucc

Fire & Fuel

Fuel type classification, Fuel map

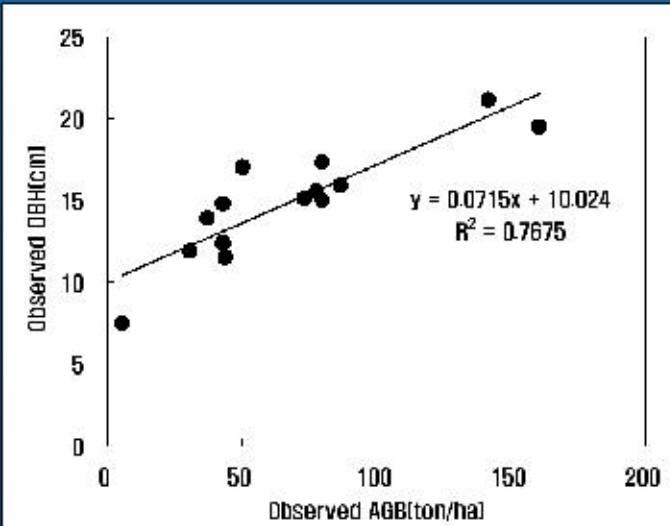

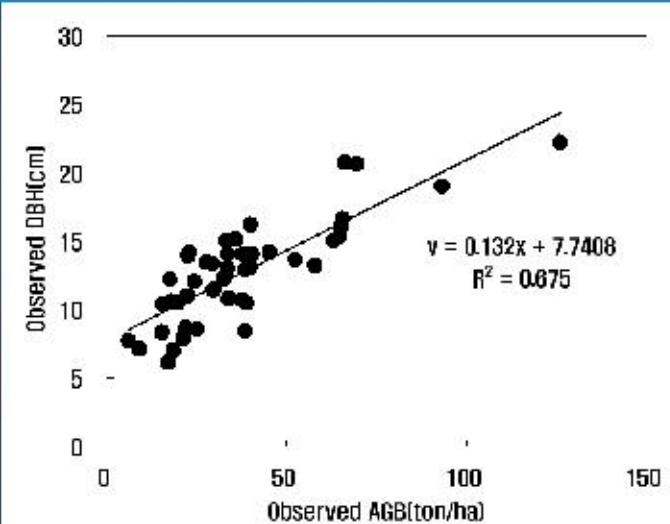

● DBH & AGB relation (On-site)

- Coniferous (n=48)

$$y = 0.132x + 7.7408 \quad (R^2 = 0.675)$$

- Deciduous (n=15)

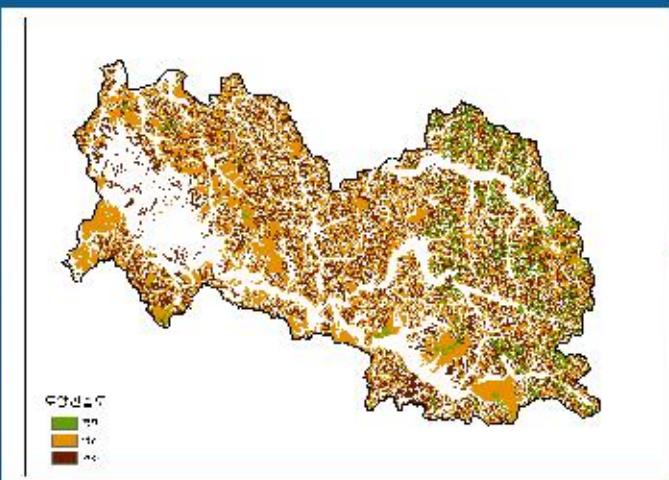

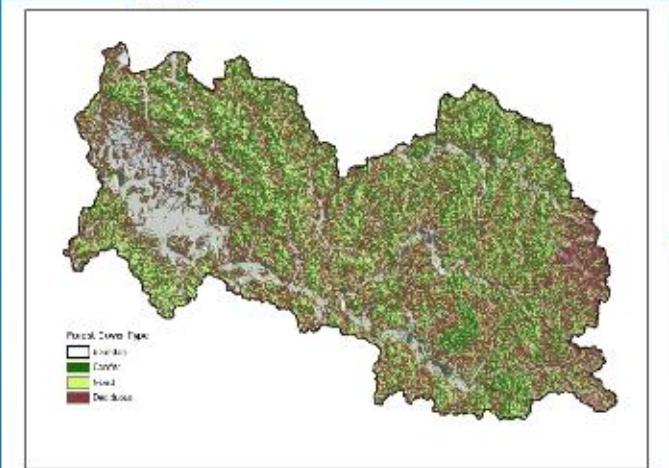

$$y = 0.0715x + 10.024 \quad (R^2 = 0.7675)$$

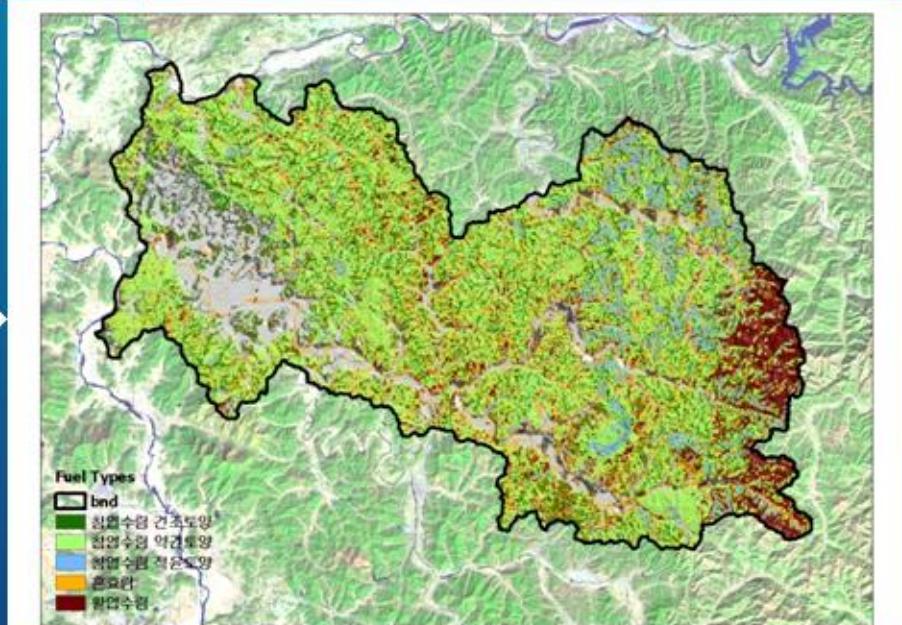

Fire & Fuel

Fuel type classification, Fuel map

Fuel type Classification (5)

- Coniferous (3 types) : C1, C2, C3
- Deciduous (1 type) : D
- Mixed (1 type) : M

❖ Fuel type classification map

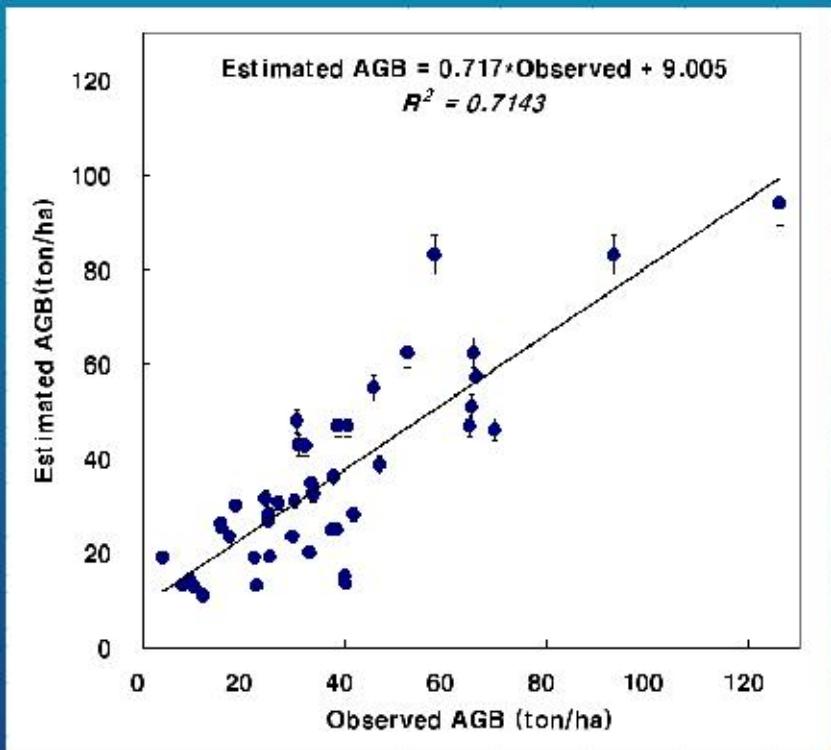

❖ Soil Condition : moderately moist, slightly dry, dry soil

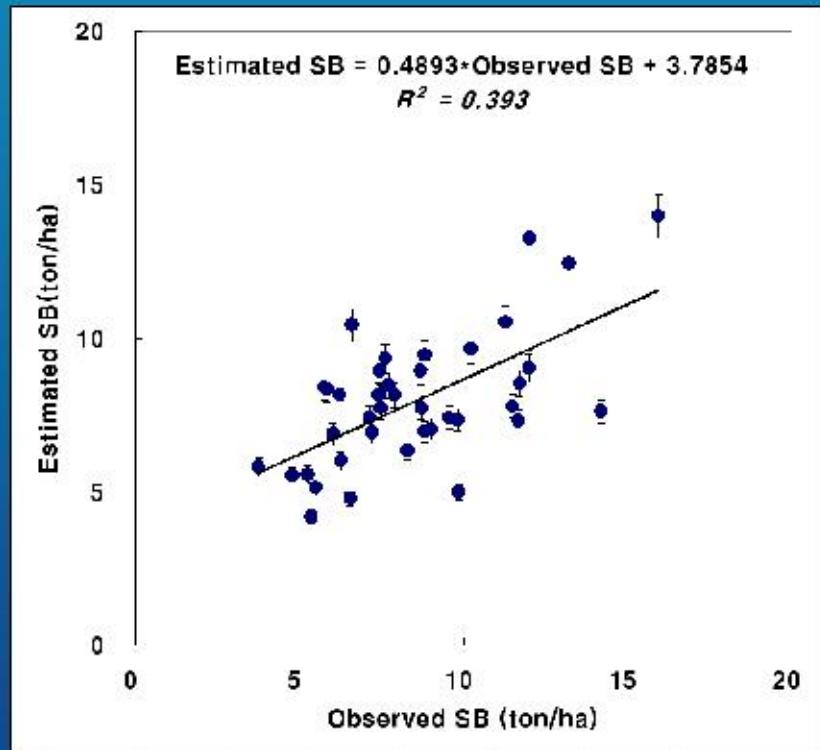

Fire & Fuel

Fuel type classification, Fuel map

- AGB estimation of Coniferous forest
(3 types)

- SB estimation of Coniferous forest
(3 types)

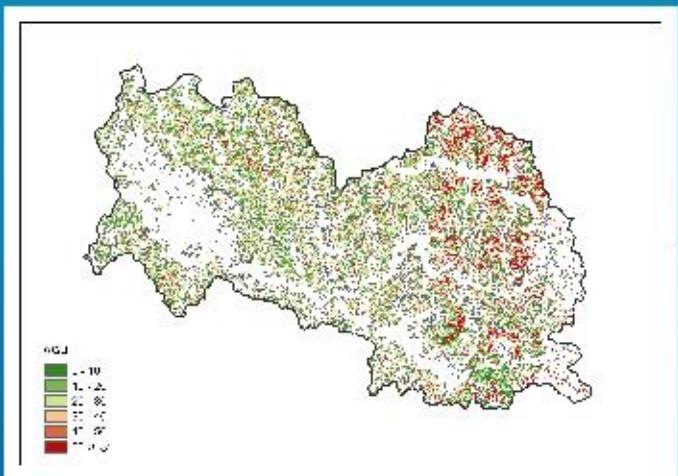

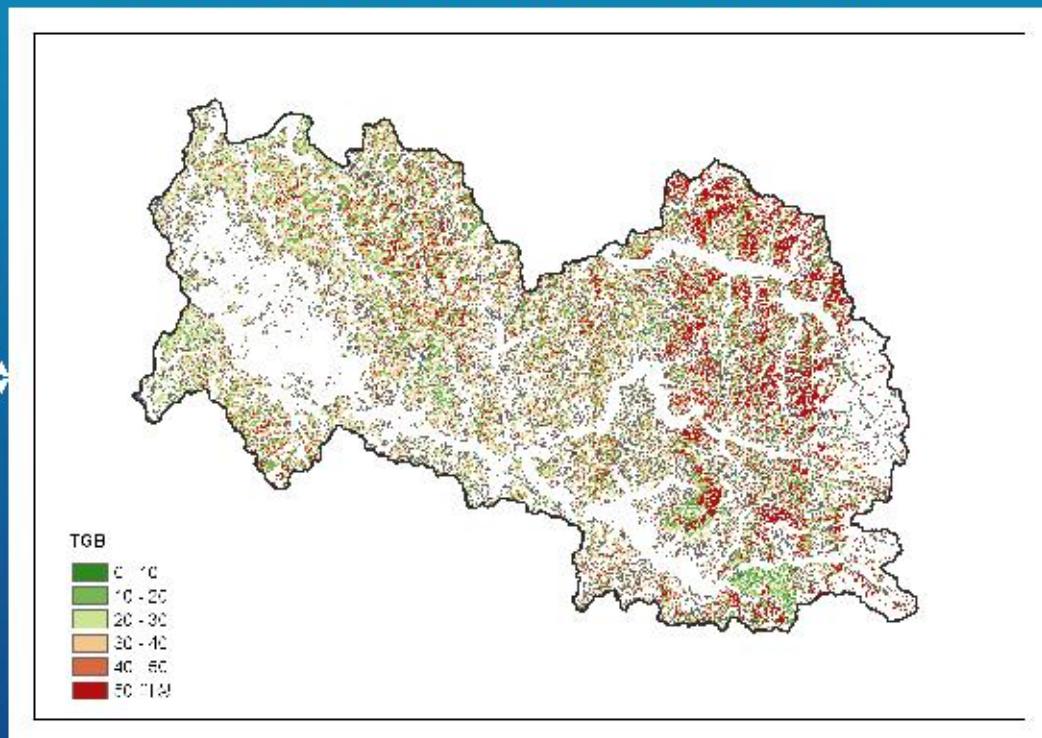

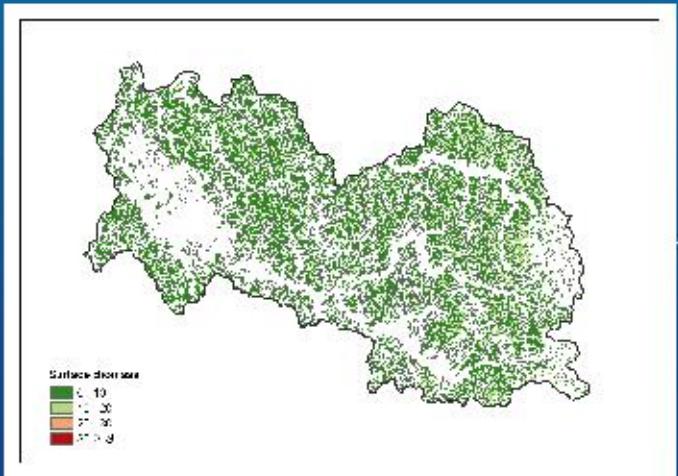

Fire & Fuel

Fuel type classification, Fuel map

- C1 AGB_{estimated} : 59.3 ± 33.2 ton/ha, Max. 128.9 ton/ha
- C2 AGB_{estimated} : 16.7 ± 10.2 ton/ha, Max. 100.5 ton/ha
- C3 AGB_{estimated} : 34.4 ± 10.8 ton/ha, Max. 57.8 ton/ha

Aboveground biomass(AGB)

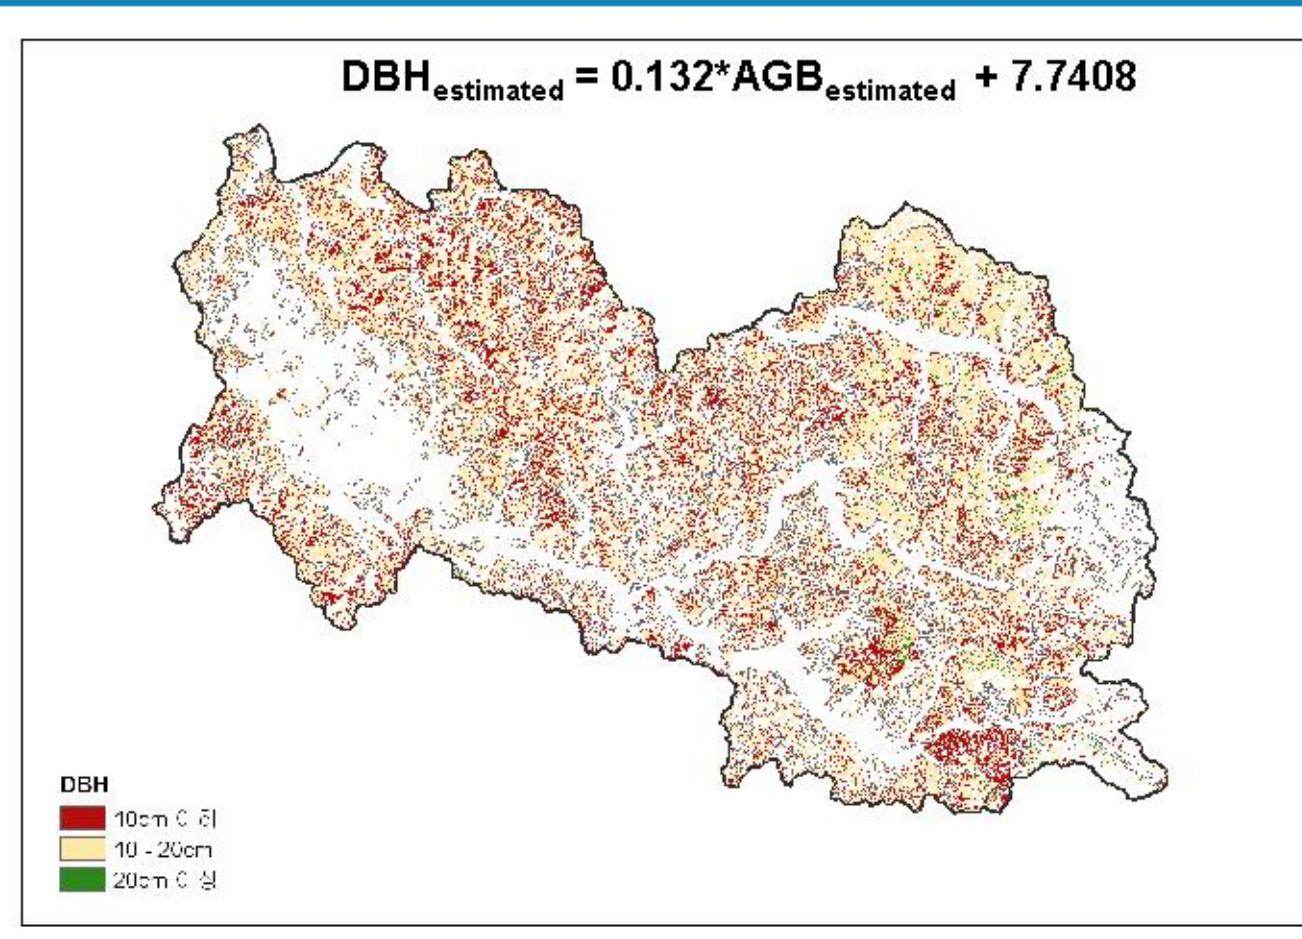

Total biomass(TB)

Fire & Fuel

Fuel type classification, Fuel map

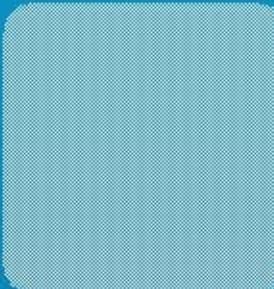

- DBH map of coniferous forest estimated

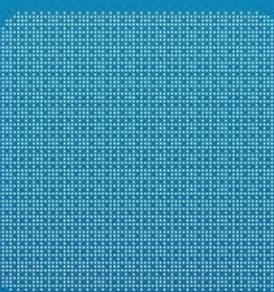

Research Plan

- **Evaluation of hazards potential and fire occurrence pattern prediction**
- **Evaluation of fire hazards on changing fuel load**
- **Web-based forest fire occurrence location information systems(FOLIS)**
- **Developing evaluation model by short-and-middle term forest fire occurrence senarios**

Q & A

Thank you for attention !
