# **Global Landscape Fire Fatalities and Damages Report**

## **2022**

The evaluation of civilian fatalities caused by landscape fires in 2022 is estimated to be at 279 globally compared to 189 in 2021, 621 in 2020 and 235 fatalities in 2019, 354 fatalities in 2018, 303 in 2017, 127 in 2016, and 198 fatalities and in 2015.

The 2022 statistical database includes losses of homes, outbuildings, vehicles and other damages as well as evacuations (number of evacuations and people evacuated).

## 15<sup>th</sup> Annual Global Landscape Fire Fatalities and Damages Report – 2022

The Global Landscape Fire Network Bulletin is published by the Global Fire Monitoring Center (GFMC)<sup>1</sup>, the former International Forest Fire News (IFFN)<sup>2</sup>, the International Wildfire Preparedness Mechanism (IWPM)<sup>3</sup> and the Global Wildland Fire Network. GFMC and GWFN are serving the United Nations International Strategy for Disaster Reduction (UNISDR) in the frame of the Science & Technology Partnership<sup>4</sup> and a Voluntary Commitment to the implementation of the Sendai Framework.<sup>5</sup>

This 28th Issue of the Global Landscape Fire Network Bulletin (former *Global Wildland Fire Network Bulletin*) provides the *15th Annual Global Landscape Fire Fatalities and Damages Report*, covering the year 2022. This report is based on the evaluation of media (newspaper, radio, and TV broadcasts) published on the internet, as well as agency reports and correspondents of the Global Wildland Fire Network from throughout the world.

The designation of this report series is renamed since 2016, since GFMC has now included other damages and consequences of wildfires, particularly those that are affecting people, property, infrastructures, and livelihood of people, including damages to agricultural products and livestock. Since only a small fraction of wildfire-related accidents is reported through those media that are published on the web, we presume that our attempt to compile a global statistical database is still very incomplete and may only scratch the surface, on a global level. However, among countries that do regularly report the negative impacts of wildfires (e.g. injuries and property damages), the data collected by the GFMC can be considered reliable and consistent with many official estimates. Unlike the World Almanac and other databases such as the International Disaster Database of the Centre for Research on the Epidemiology of Disasters (CRED)<sup>6</sup>, GFMC aims at identifying all individual incidents that have been reported.

<sup>6</sup> [www.cred.be](http://www.cred.be) - Note: the CRED defines a disaster as “a situation or event, which overwhelms local capacity, necessitating a request to a national or international level for external assistance; an unforeseen and often sudden event that causes great damage, destruction and human suffering”. For a disaster to be considered, at least one of the following criteria must be met: (a) 10 or more people reported killed; (b) 100 or more people reported affected, (c) declaration of a state of emergency, or (d) call for international assistance. The GFMC does not follow these criteria as fatalities or injuries caused by wildfires are usually below these thresholds, and the high number of incidents would otherwise not be recorded at all. The CRED reports do not provide explicit data on wildfire-related incidents.

At the end of this report, web links are provided to publications / reports reporting injuries and fatalities. The short incident notes (by country, in alphabetic order) are taken from

- Detailed reports that have been published on the dedicated GFMC web page “Recent Media Highlights on Fire, Policies, and Politics – Section 4 Current News Regularly selected by GFMC” between January and December 2022 (<https://gfmc.online/media-highlights-on-fire-policies-and-politics.html>) and
- Other reports, which have been stored in the GFMC database but were not published online. Links or detailed information on any event included in this report can be provided upon request.

Note concerning impact of landscape fire smoke pollution: Landscape fire smoke pollution is exerting high risk on human health and security. Extreme exposure to smoke may lead to premature mortality of up to several hundred thousand deaths per year. Statistical data / precise information about smoke-related injuries and fatalities related to individual landscape fires or smoke pollution episodes are not yet available – thus there are only estimated by modeling. In the GFMC Annual Global Landscape Fire Fatalities and Damages Reports we are not yet able to provide reliable statistical data. For more details see a recent WMO publication with numerous references on case studies and models.<sup>7</sup>

## Summary

The 15<sup>th</sup> Annual Global Landscape Fire report contains the summary of fatalities, structural and agricultural losses, evacuation cases for the year of 2022. However, the detailed numbers cannot be accurate since some media reports did not state the exact numbers of the above-mentioned losses as well as the injured people.

The fatalities report reveals that in 2022, a total of 238 civilians were killed and 697 civilians injured and respectively in 31 countries (Fig. 1 and 2; Tab.4).

Among the fatalities and injuries of firefighting personnel, 33 firefighters and 8 pilots died and 369 firefighters and 1 pilot were injured by wildfires in 22 countries (Tab. 2 and 3). The causes of the deaths of firefighters according to the media reports are succumbed to medical emergency, line of duty, fell while training, heart attack, cardiac arrest, collapsed, struck by a tree, unknown or unspecified, burned, vehicle related, plane or helicopter.

In total, more than 7232 private homes were destroyed and more than 593 homes in 24 countries were damaged by wildfires in 2022. Additionally, more than 277 outbuildings destroyed, and thousands of structures destroyed and damaged, as well as many farm animals and home pets killed in.

As a result of wildfires, more than 264,413 people had to be evacuated. This number includes reported cases of evacuations of 36,083 homes and families, respectively.

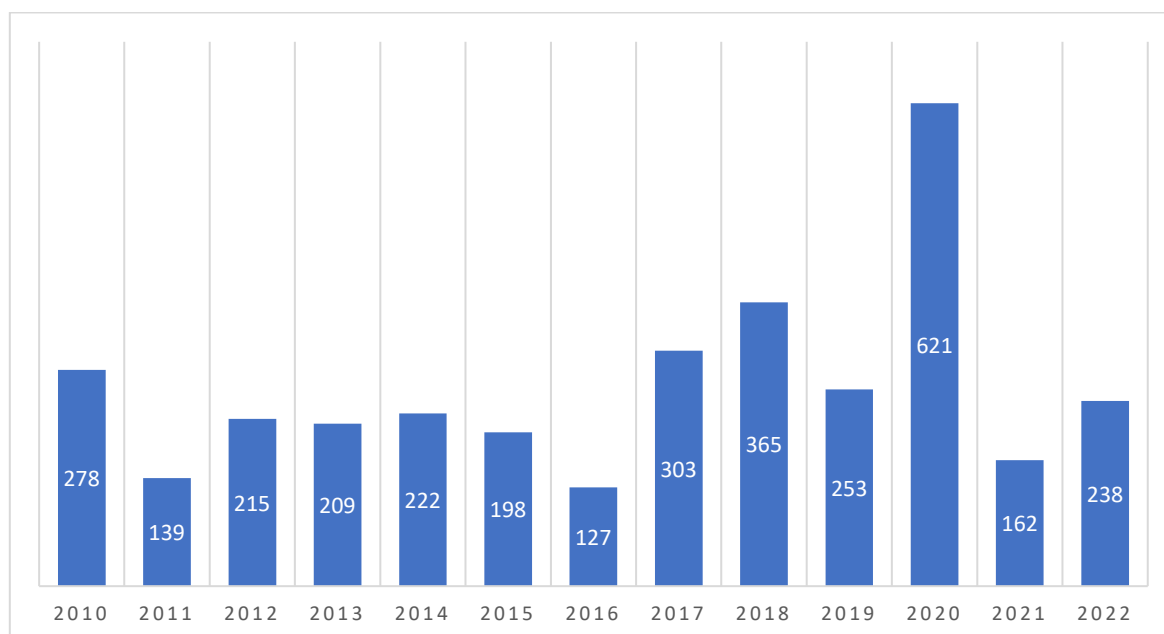

The wildfires caused hundreds of roads, highway, trails, parks, schools, resorts, National Parks, forests, and many other closures, and situations such as mining operation and train service shut down, temporary flight restrictions, flight disruptions, airport and business, health center, school evacuation etc.
