

**FIRE PARADOX – GFMC Prescribed Burning Demonstration Network Inventory Sheet**

Prescribed Burning Demonstration Sites - Site Description and Objectives -		Local Site Name:	
Country: <b>Germany</b>	Region: <b>North West</b>	Location: <b>Haltern am See</b>	
Unit No./Admin. Unit:	Owner: <b>Landkreis Recklinghausen</b>	Site area (ha): <b>150</b>	
UTM zone:	UTM (x):	Map / Aerial photo : <input type="radio"/> Yes (Please attach) <input type="radio"/> No	
	UTM (y):		
First established: <b>2002</b>	Area(s) burnt (ha): <b>3.0</b>	Fire return interval (or time since last burn, or next burn planned): <b>appr. 15 years</b>	
Number of plots (in case of an array of sub-plots for experimental repetitions, particular site differences or high number of operationally burned sites): <b>7</b>			
Special remarks:			
<b>Purpose of Treatment:</b>			
Specific Treatment Objectives: <b>Control of Forest Succession, Improvement of <i>Calluna vulgaris</i> habitat</b>		Objectives reached? <input type="radio"/> Yes <input type="radio"/> No Specify: too wet	
<b>Desired burn conditions to reach objectives (optional or if necessary as general prerequisite)</b>			
Wind speed (m/s): <b>15-20 km/h</b>		Wind direction: n.a.	
Relative humidity (%): <b>below 55%</b>		Soil moisture: n.a.	
Air temperature (°C):		Burn period (time of year): <b>end of Winter</b>	
What problems do occur? <b>Good Fire Weather conditions are rare</b>			
<b>Site description</b>			
Vegetation type (main species): <b><i>Calluna vulgaris</i> Grass <i>Betula pendula</i></b>	Annual mean precipitation (mm/a):	Mean precipitation during time of burn (mm):	
Fuel load (target fuel) (t ha <sup>-1</sup> ): <b>Appr 10</b>	Annual mean temperature (°C):	Mean temperature during time of burn (°C): <b>5</b>	
Fuel description: <b>Dense <i>Calluna</i></b>			
Topography: <b>plain</b>	Slope (%) <b>0</b>	Aspect:	Altitude (m a.s.l.):
Soil conditions:			
Other:
